3 PHASE TRAINING

Electric Distribution Systems Training

Follow power from a distribution substation through feeders to the customers it serves.

What is the course?

Explore how distribution equipment, protection, and voltage control work together. Apply a feeder case study to design, planning, operations, and restoration decisions, including the impact of distributed resources.

Who should attend?

Utility engineers, planners, designers, operations and field staff, and technical project managers who work with distribution systems.

Eight hours of instructor-led training.

Why Choose Us?

Cost

Your organization pays one course fee with unlimited attendees at no extra cost.

Quality and Experience

Real projects and interactive discussion connect concepts to practical decisions.

Customization

Each course content is individually customized to your team and organization

Content examples

Feeders and equipment

- Distribution layout and service
- Overhead and underground construction
- Transformers and voltage regulation
- Feeder configurations

Protection and operations

- Relays, breakers, and reclosers
- Fault isolation and restoration
- Operations and communications
- Distribution automation

Planning and interconnection

- Load growth and feeder studies
- Distributed resource connections
- Voltage and reliability tradeoffs
- Grid modernization
