3 PHASE TRAINING

Power System Protection

Follow a fault from detection through relay decisions to breaker operation.

What is the course?

Compare how utilities protect feeders, transmission lines, transformers, and buses. Use time-current curves and example event records to explain which devices should operate, where coordination matters, and how teams verify protection.

Who should attend?

Utility engineers, relay and substation technicians, system operators, distribution planners and project managers who work with protection systems.

Eight hours of instructor-led training.

Why Choose Us?

Cost

Your organization pays one course fee with unlimited attendees at no extra cost.

Quality and Experience

Real projects and interactive discussion connect concepts to practical decisions.

Customization

Each course content is individually customized to your team and organization

Content examples

Fault detection and equipment

- Common power system faults
- Instrument transformers
- Protective relays and breakers
- The trip path

Protection applications

- Distribution feeder protection
- Transmission line protection
- Transformer and bus protection
- Time-current coordination

Testing and event review

- Protection testing
- Interpreting event records
- Troubleshooting relay operation
- Coordination exercise
